

Assignment 9 Consumer

Name: Kesav Adithya Venkidusamy

Course: DSC650 - Big Data

Instructor: Amirfarrokh Iranitalab

The following notebook should help you with debugging and testing assignment 9. It creates a `KafkaConsumer` the subscribes to the `LastnameFirstname-simple`, `LastnameFirstname-windowed`, and `LastnameFirstname-joined` topics and prints any messages.

```
In [1]: import json

        from kafka import KafkaConsumer
```

Configuration Parameters

TODO: Change the configuration parameters to the appropriate values for your setup.

```
In [2]: config = dict(
        bootstrap_servers=['kafka.kafka.svc.cluster.local:9092'],
        first_name='KesavAdithya',
        last_name='Venkidusamy'
    )

    config['client_id'] = '{}{}'.format(
        config['last_name'],
        config['first_name']
    )

    config['topic_prefix'] = '{}{}'.format(
        config['last_name'],
        config['first_name']
    )

    config['simple_topic'] = '{}-simple'.format(config['topic_prefix'])
    config['joined_topic'] = '{}-joined'.format(config['topic_prefix'])
    config['windowed_topic'] = '{}-windowed'.format(config['topic_prefix'])

    config
```

```
Out[2]: {'bootstrap_servers': ['kafka.kafka.svc.cluster.local:9092'],
        'first_name': 'KesavAdithya',
        'last_name': 'Venkidusamy',
        'client_id': 'VenkidusamyKesavAdithya',
        'topic_prefix': 'VenkidusamyKesavAdithya',
        'simple_topic': 'VenkidusamyKesavAdithya-simple',
        'joined_topic': 'VenkidusamyKesavAdithya-joined',
        'windowed_topic': 'VenkidusamyKesavAdithya-windowed'}
```

Close the consumer, waiting indefinitely for any needed cleanup.

```
In [8]: def create_kafka_consumer(topics, config=config):
        bootstrap_servers = config['bootstrap_servers']
        client_id = config['client_id']
        topic_prefix = config['topic_prefix']
        topic_list = ['{}-{}'.format(topic_prefix, topic) for topic in topics]

        return KafkaConsumer(
            *topic_list,
            client_id=client_id,
            bootstrap_servers=bootstrap_servers,
            value_deserializer=lambda x: json.loads(x)
        )

        consumer = create_kafka_consumer(['simple', 'windowed', 'joined'])
```

Gets a list of this consumer's current subscriptions

```
In [9]: consumer.subscription()
```

```
Out[9]: {'VenkidusamyKesavAdithya-joined',
        'VenkidusamyKesavAdithya-simple',
        'VenkidusamyKesavAdithya-windowed'}
```

The following function prints messages from the current consumer subscriptions. It will continue until manually stopped.

```
In [10]: def print_messages(consumer=consumer):
        try:
            for message in consumer:
                msg_metadata = 'Message metadata: {}:{}:{}'.format(
                    message.topic, message.partition, message.offset
                )
```

```

        if message.key is not None:
            msg_key = message.key.decode('utf-8')
        else:
            msg_key = ''
        msg_value = json.dumps(message.value, indent=2)
        msg_value = '\n'.join([' {} '.format(value) for value in msg_value.split('\n')])

        print('Message metadata:')
        print('  Topic: {}'.format(message.topic))
        print('  Partition: {}'.format(message.partition))
        print('  Offset: {}'.format(message.offset))
        print('Message Key: {}'.format(msg_key))
        print('Message Value:')
        print(msg_value)
        print()
    except KeyboardInterrupt:
        print("STOPPING MESSAGE CONSUMER")

print_messages()

```
